Cravvr — 2026 Master Marketing & Rollout Plan

The unified operating doctrine. Combines the Brez/CTC data-first paid playbook (already in motion) with boots-on-the-ground supply-side acquisition (Portland-first, founder-led). One document, calendar-anchored to where we actually are.

Today: 2026-05-06 — Wednesday of Brez Week 1. Pipeline live, consumer marketing not yet started, Stripe still on test keys, ~0 trucks formally onboarded.

---

0 — The Three Operating Rules

These rules govern every spend, every hire, every launch decision for the entire year.

#	Rule	What it means in practice
1	**Supply before demand**	Boots-on-ground truck onboarding ALWAYS leads paid consumer ads in any new geo. Empty-app first impression kills the flywheel.
2	**Earn before you spend**	Every spend tier has a milestone gate. Don't scale paid until LTV:CAC d30 > 1.5×. Don't expand cities until Portland is cash-flow positive.
3	**Data over instinct**	Brez/CTC discipline: every link UTM-tagged, every channel reviewed weekly via `/admin/growth`, every kill/scale decision tied to a metric not a feeling.

The synthesis insight: The Rollout Plan ("get 20 trucks first, then market") and the Brez Plan ("light up data, run paid") are NOT sequential — they run in **parallel tracks**. Boots-on-ground builds supply. Digital builds demand-side data infrastructure. They converge when paid ads launch (Brez Week 3 / late May) into an app that already has trucks worth opening.

---

1 — Where We Are (Phase 0, May 5–11)

Live infrastructure

- Pipeline verified end-to-end: puppeteer → live site → Supabase row landed
- Meta Pixel + GA4 firing on prod
- Domain verified with Meta
- ~~Resend pipeline live, branded email lands in inbox~~
- Lifecycle email crons scheduled (hourly/daily/weekly)
- `/admin/growth` ready to render data the moment data exists

- Stripe scaffold shipped — **on test keys** (live activation Week 2)

Open debts to clear THIS WEEK

- ☑ ~~Roll three exposed secrets (Resend API, Supabase service_role, Supabase access token)~~
- ☑ ~~Verify Resend domain DNS — DKIM, SPF, DMARC all green before any volume~~
- ☑ ~~Delete stale SendGrid secrets (cosmetic)~~
- ☐ Map every Portland food truck pod — Lloyd, PSU Farmers Market, Mississippi Ave, Cartopia, Alberta Arts (spreadsheet: name, IG, regular spot, schedule)
- ☐ Print 50 founder one-pagers + 100 business cards

Truck onboarding status

- **Goal:** 20 founding trucks committed by May 31
- **Where we actually are:** 0 (not a real number — get an honest count)
- **Founding offer:** First 6 months of Pro free + "Founding Truck" badge + logo on launch page

---

2 — The Two Parallel Tracks

Track A — Boots-on-Ground (Supply / Founder-Led)

Lives entirely outside the app's digital surface. Founder time, not money.

Activity	Cadence	Who
Visit Portland food trucks in person	8–10 trucks/week through May	Founder
Founding truck pitch (free 6mo + badge + meetup invite)	At every visit	Founder
Build truck profile FOR them on the spot	Same visit, on phone	Founder
"Founding Truck" pizza meetup	Once, ~May 24	Founder
Weekly truck check-in calls	Friday afternoons	Founder
Truck owner onboarding kit (one-pager + QR code + table tent)	Hand-deliver	Founder

Track B — Digital Funnel (Demand / Data)

The Brez/CTC playbook. Lives in the app + ad accounts + `/admin/growth`.

Activity	Cadence	Tool
UTM-tag every link, everywhere	Always	UTM builder in `/admin/marketing`
Cohort + channel review	Weekly Sunday	`/admin/growth`
Lifecycle emails (welcome, abandoned cart, first-reorder, win-back)	Automated	Resend + Supabase crons
Pixel/GA4/CAPI event quality checks	Weekly	Meta Events Manager + GA4 DebugView
Ad spend log + LTV:CAC	Weekly	`/admin/growth` Growth tab

Convergence point: Late May — when paid ads launch, both tracks deliver to the same place: a live, multi-truck app with attribution intact.

---

3 — The Calendar (rest of 2026)

MAY — Foundation (where we are now)

W1 May 5–11 · Light up the data layer

- UTM-tag every social bio (IG, TikTok, FB, X) — `?utm_source=<platform>&utm_medium=bio&utm_campaign=may_2026`
- ~~Resend DNS verified (DKIM/SPF/DMARC green~~)
- Post 1 UTM-tagged piece per platform with `utm_medium=organic_post`
- **Boots track:** map all Portland trucks, design one-pager, print materials
- **Sun May 11 read:** `SELECT first_utm_source, COUNT(*) FROM visitors WHERE first_seen_at > NOW() - '7 days' GROUP BY 1` — target ≥10 attributed visitors

W2 May 12–18 · Stripe live + content cadence + first 5 trucks

- Flip Stripe to live keys (Vercel `VITE_STRIPE_PUBLISHABLE_KEY`, Supabase `STRIPE_SECRET_KEY`, webhook URL + new `whsec_…`)
- Test end-to-end with real $1 order
- Content cadence: IG 3 posts + 5 stories, TikTok 4–5 videos, FB cross-post
- **Boots track:** visit 10 trucks in person, sign 5+ founding trucks (with profiles built)
- **Sun May 18 target:** ≥50 unique visitors that week, ≥3 signups, ≥1 paid online order

W3 May 19–25 · First paid ad test + 10 more trucks

- Meta paid test: $10–15/day × 7 days, geo-targeted Portland, optimization goal = Purchases
- Creative: ONE 15-sec video (food shot → app screen → "tap to order"). Don't overproduce.

- Destination: `?utm_source=facebook&utm_medium=paid_social&utm_campaign=may_paid_test&utm_content=video_v1`
- **Boots track:** 10 more truck visits, target 15 total committed
- **Wed May 21 midpoint:** check signups by campaign — kill creative/audience if 0 signups & <20 visitors
- **Founding Truck pizza meetup ~May 24** at a food cart pod (use the 20–25 committed list)

W4 May 26–Jun 1 · First decision + lifecycle email tuning

- Read `/admin/growth` channel leaderboard, 30-day window
- LTV:CAC d30 decision matrix:
  - `> 3.0×` → triple budget next month
  - `1.5–3.0×` → maintain, iterate creative
  - `1.0–1.5×` → new creative or audience before judging
  - `< 1.0×` → kill, redeploy
- Tune lifecycle email templates with real customer voice (`abandoned-cart.tsx`, `first-reorder-nudge.tsx`, `win-back.tsx`); redeploy `resend-email`
- **Boots track:** first follow-up calls with founding trucks — are they checking in 3+ times/week?
- **Phase 0 exit gate:** 20+ committed trucks, 300+ MAU, 4.0+ rating, ≥1 paid online order, first cohort row in `cohort_performance_v`

JUNE — Soft Launch & First Paid Channel

Goal: turn the validated channel into a repeatable engine; sustainable content rhythm; rewards/referral live.

Week	Focus	Critical action
W1 (Jun 2–8)	Double down	2–3× budget on Week 4's winning channel. New creative variants.
W2 (Jun 9–15)	Second channel test	If Meta won → test TikTok Spark Ads ($10–15/day). If Meta failed → iterate creative, don't add channels.
W3 (Jun 16–22)	First real cohort lookback	Run cohort decay query. Are May cohorts retaining? Lifecycle emails performing?
W4 (Jun 23–30)	CAPI + rewards launch	If monthly Meta spend >$500, add `META_CAPI_PIXEL_ID` + `META_CAPI_ACCESS_TOKEN`. Launch Cravvr Points (50/150/400 redemption tiers). Launch referral (25 bonus pts/friend).

Boots track all of June: push Portland truck count from 20 → 35. Daily check-in habit is the #1 priority — call every truck that goes quiet 3 days in a row.

June exit gate: 1,000+ MAU Portland, 20+ paying Pro trucks once we turn Pro on (see July), positive unit economics emerging, app rating holding 4.2+, referral generating ≥15% of new downloads.

JULY — Monetize the Supply Side

Pro subscription launch. This is the moment the supply side becomes a paying customer base.

- $29/mo or $49/mo tier (start at $29 to reduce activation friction; raise on tier-2 features later)
- 30-day notice to founding trucks before billing starts
- Pro features that justify the cost: push to nearby users on check-in, advanced dashboard analytics, priority placement in search, monthly performance report
- Handle every churn personally — call them, find out why, fix it
- **Target by July 31:** 20 paying Pro trucks ($580/mo MRR at $29) OR 15 at 49(735/mo)

Paid ads in July: scale winning creative, kill underperformers weekly, test 2 new ad variants/week.

Local PR push: pitch Willamette Week, Portland Mercury, Portland Business Journal, OregonLive food. Angle: "Portland founder builds app to solve food truck discovery problem." Reach out to 2–3 Portland food micro-influencers (10K–50K followers) — offer free Pro partnership or rewards credit instead of cash.

AUGUST — Optimize & Build for Scale

- Creative cadence: 2 new ad creatives/week, kill worst performer weekly
- Lookalike audiences: once Meta has >100 conversions, build 1% lookalike from highest-LTV cohort
- Email automation tuning: identify highest-conversion lifecycle flow, double down. Add tracking pixels to email templates if open/click visibility matters.
- Cohort decay analysis: are June cohorts performing better than May? Why? Product getting better, or acquisition getting worse?

August exit gate: 2,000+ Portland MAU, 30+ Pro subs, MRR > total ad spend, blended LTV:CAC d30 ≥ 1.8×.

SEPTEMBER — Scale Portland + Begin City 2 Pre-Build

This is when the playbook becomes a doc. Document everything Portland taught you so City 2 launches faster.

Portland scale:

- Double winning channel ad spend (cap $1,500/mo until cohort d60 LTV is known)
- Launch Google App Install campaigns now — broader audience justified by retention data
- Hire part-time video editor ($300–500/mo, 10–15 hrs/mo) — content volume can't drop
- Target 5,000 Portland MAU by end of month, 50+ Pro trucks, 75+ active trucks

City 2 pre-build (supply only, no demand spend):

- Pick: Miami FL or Austin TX (food truck density, social food culture, market size)
- Identify top 30 trucks via IG / Google Maps / local food blogs
- Begin remote outreach with Portland success story + founding truck offer
- Goal by Sep 30: 10 committed City 2 trucks

OCTOBER — National PR + City 2 Supply Build

- Pitch Eater, Thrillist, Food & Wine, Fast Company (startup angle)
- Submit to Webby Awards, Fast Company Innovation by Design, Apple App Store editorial
- Podcast outreach: 1–2 founder/food entrepreneur appearances/month
- One scouting trip to City 2 — meet trucks in person, replicate the Portland founding-truck pitch
- Goal by Oct 31: 15 committed City 2 trucks, profiles built and ready

NOVEMBER — City 2 Soft Launch (Supply Live, Demand Light)

- Activate City 2 truck profiles
- Begin city-specific TikTok/IG content — build local following BEFORE app push
- City 2 trucks post about Cravvr to their own audiences (the most powerful organic demand lever)
- **Do NOT run paid consumer ads in City 2 yet.**

DECEMBER — City 2 Full Launch

- Flip switch: activate City 2 paid TikTok + Meta playbook from Portland
- Launch giveaway: "10 people win a food truck crawl in [City 2]"
- Local press outreach in City 2 (same playbook as Portland, faster execution)
- **City 2 60-day target:** 500 MAU, 25 Pro subs in that city
- Hire City Launch Coordinator ($1,000–1,500/mo, contract part-time) — owns truck onboarding for City 3+

---

4 — Channel Playbooks

TikTok (primary consumer acquisition)

- Volume beats production. Phone is fine.
- 5–7 posts/week through July, daily once part-time editor is hired
- Formats that work: hidden gem spotlights, "I tried 5 trucks in [pod]," day-in-the-life with a truck owner, GRWM food run
- Hook formula: food visual in first 2 seconds, location in first 5 seconds
- Engage every comment for 30 min after posting (algorithm signal)
- Spark Ads start: only boost organic videos that already perform — don't create ad-first content

Meta (Instagram + Facebook)

- IG Reels = repurpose every TikTok
- IG Stories = daily — live truck check-ins from the app, polls, behind-the-scenes
- IG grid = curated truck photography, rewards highlights, city spotlights — tag every featured truck so they reshare

- Paid ads: Portland geo, age 22–42, food/local dining/foodies interests, optimization = Purchases
- Always run two creatives — one informational ("how Cravvr works"), one craving-driver (food porn → app screen → CTA)

Email (Resend, lifecycle automated)

- "The Cravvr Drop" weekly newsletter — best truck this week, new trucks, rewards spotlight
- Welcome sequence: Day 1 (welcome + how to earn points), Day 3 (find a truck near you), Day 7 (first rewards milestone)
- Truck-owner list (separate): product updates, success stories from other trucks, monthly performance summary
- Lifecycle automations already wired: abandoned cart, first-reorder nudge, win-back. Tune copy in `supabase/functions/_shared/emails/` once real customer voice is known (end of May).

SEO (slow but free)

Keyword	Vol/mo	Page	Timeline
food trucks near me Portland	2,400	GPS-hook landing page	June
best food trucks Portland	1,900	Blog roundup + map	July
Portland food truck schedule	880	Auto-updated schedule page	August
food truck app	5,400	App landing page	June

In-Person (the unfair advantage)

- Truck visits = highest-conversion acquisition channel for SUPPLY. No digital channel competes.
- Stickers + QR table tents at every founding truck location — every customer at the truck is a perfectly-targeted potential consumer
- Founding Truck meetup once per quarter — community is the moat
- Portland Food Cart Association + Oregon Food Truck Association — partner for credibility

Influencer (start nano, never go big)

Tier	Followers	Cost	When
Nano	1K–10K	trade or $0–100	now
Micro	10K–100K	$100–500	July+
Mid	100K–500K	$500–2,000	city launch only
Macro	500K+	$2,000+	major milestones only

5 — Spend Unlock Gates

The most-skipped section. These are hard rules.

Milestone required	What it unlocks	Approx month
App live + 20 trucks committed	Content creation $100–200/mo	May (now)
300 MAU + trucks checking in 3×/week	First giveaway, first paid test ($300–600/mo)	June
App rating ≥4.0 + d7 retention signal	Scale paid to $1,000/mo	July
20+ paying Pro trucks + revenue > ad spend	Hire part-time video editor	September
Portland cash-flow positive	City 2 consumer launch spend	November
2 profitable cities	Full-time growth hire + City 3 prep	2027 Q1

The three rules that prevent ruin:

1. Never run paid ads in a new city before the trucks are live there.
2. Never scale a paid channel without 14 days of CPI / cohort data.
3. Never hire full-time until that city's revenue covers the salary.

When in doubt: wait one more month, collect more data, decide.

6 — Weekly Operating Cadence

This is the discipline that runs forever. Set calendar holds.

When	What	Where
Monday AM	Review weekend `/admin/growth` — anything broken?	Dashboard
Wednesday	Mid-week paid ad checkpoint — kill or hold	Meta + TikTok ads manager
Friday afternoon	Truck check-in calls — every founding truck that's gone quiet	Phone
Sunday	Channel review (`/admin/growth` cohort + leaderboard); content plan for next week	Dashboard + Notion
1st of month	Cohort lookback — refresh `cohort_performance_v` materialized view; LTV decay analysis	SQL
Quarterly	Strategic review — new channels, new geos, new product lines	Off-site

7 — KPIs by Phase

Metric	Phase 0 (May)	Phase 1 (Jun–Aug)	Phase 2 (Sep–Nov)	Phase 3 (Dec+)
Portland MAU	100	1,000	3,000	5,000
Trucks committed	20	35	60	80
Paying Pro trucks	0 (free)	20	40	60
Pro MRR	$0	$580	$1,160	$1,740
App rating	≥4.0	≥4.2	≥4.4	≥4.5
LTV:CAC d30	n/a	≥1.5×	≥2.5×	≥3.0×
Lifecycle email open rate	n/a	30%	35%	40%

8 — Anti-Roadmap (what NOT to do)

Don't	Why	Do instead
Launch in 3 cities	Thin supply everywhere	Dominate Portland first
Run paid ads before organic retention	Pay to acquire users who find an empty app	Prove organic retention, then accelerate
Build features nobody asked for	Wastes runway	Talk to 10 users/week, build only repeated requests
Hire too early	Burns runway	Contractors + part-time until cash flow stable
Compete on Pro price	Devalues product	Compete on results — Pro trucks get more customers
Ignore truck churn	Shrinking supply kills demand	Call every quiet truck, fix the reason
Over-invest in brand before product	Pretty logo doesn't fix retention	Make the app impossible to stop using first
Spend ad budget evenly across channels	Splits attention, slows learning	Concentrate on 1 winning channel until ratio breaks

9 — Annual Budget Estimate (bootstrap path)

Phase	Months	Monthly spend	Phase total	Expected revenue
0 — Foundation	May	$200–500	$200–500	$0–200
1 — Soft launch + paid test	Jun–Aug	$600–1,500	$1,800–4,500	$1,500–4,000
2 — Scale Portland	Sep–Nov	$2,000–4,000	$6,000–12,000	$6,000–12,000
3 — City 2 launch	Dec	$3,500–6,000	$3,500–6,000	$4,000–7,000
2026 total			**$11,500–23,000**	**$11,500–23,000**

Recommendation: target the bootstrap floor ($12K). Increase spend ONLY when retention + CPI metrics justify it. The product and community will tell you when to accelerate.

10 — The 30-Day Checklist (start here, today)

Most concrete part of the entire plan. Don't read past this — execute it.

Day	Action
May 6 (today)	Roll exposed secrets. Verify Resend DNS. UTM-tag all 4 social bios.
May 7	Map every Portland food truck on Google Maps (spreadsheet w/ name, IG, regular spot).
May 8–9	Design + print 50 one-pagers + 100 business cards. Visit 2 trucks in person to test the pitch.
May 10–11	Post 1 UTM-tagged piece per platform. Sun: first 7-day visitors-by-source read.
May 12	**Flip Stripe to live keys.** Test $1 real order end-to-end.
May 13–17	Truck visits 5 days × 2 trucks = 10 truck visits. Get 5 founding trucks signed.
May 18	Post weekly: 3 IG, 5 stories, 4 TikTok. Cross-post FB.
May 19	**Launch first Meta paid test** ($10–15/day, Portland geo, 7 days).
May 20–24	10 more truck visits. Sign 10 more founding trucks. **Founding Truck meetup at a food cart pod May 24.**
May 21	Mid-test paid ad checkpoint. Kill or hold based on signups.
May 25	Run `SELECT refresh_cohort_performance();` — first cohort row should appear.
May 26	Read `/admin/growth` leaderboard. Make first ratio-driven decision.
May 27–30	Execute decision (scale, kill, or iterate). Tune lifecycle email templates.
May 31	**Phase 0 review.** Did we hit 20 trucks + 300 MAU + first paid order + first cohort row?

The one thing that matters tomorrow morning: UTM-tag your bios and start truck visits. Both tracks. Same day. Everything else flows from that.

---

11 — The One Sentence

Cravvr wins by combining founder-led truck onboarding (the unfair advantage) with the Brez/CTC data-discipline paid playbook (the scale lever) — supply first, demand second, data third, expansion fourth, never out of order.

Cravvr · 2026 Master Plan · Synthesizes Brez/CTC weekly cadence + Strategic Rollout Plan + Comprehensive Marketing Plan
